PUBLICATIONS

Due to working in an interdisciplinary setting, my work follows many different conventions for authorship. Theoretical mathematics and theoretical computer science tend to be published alphabetically. Applied mathematics and other domain settings tend to be published in descending order of contribution, with graduate students and postdocs listed first; followed by PIs.

Computer Science Conference Proceedings

My work is interdisciplinary and often crosses between mathematics and theoretical computer science. In CS, both journals and selective proceedings are highly regarded venues for publications. The proceedings have the advantage of high visibility and a shortened time to press. These venues are peer-reviewed by a general minimum of between 3 and 5 evaluators and can be highly competitive. Acceptance rates are provided when known. Most notable conferences in my work are the Symposium on Computational Geometry (SoCG), which is the top conference in Applied Topology and Geometry [39, 41, 42]; and IEEE Scientific Visualization (SciVis) published in the journal TVCG, which is the top conference in visualization [40].
